

VISUAL GUIDE: NAVIGATING STATISTICAL TABLES

Blue = Row Coordinate

Red = Column Coordinate

Yellow = Your Critical Value

1. FINDING A Z-TABLE VALUE

Goal: Find the area for $Z = 1.24$.

Method: Use the first two digits (1.2) for the row and the last digit (.04) for the column.

Z	.02	.03	.04	.05
1.1	.8686	.8708	.8729	.8749
1.2	.8888	.8907	.8925	.8944
1.3	.9066	.9082	.9099	.9115

2. FINDING A T-TABLE VALUE

Goal: $df = 9$, Two-tailed $\alpha = 0.05$.

Method: Locate Degrees of Freedom on the left and Alpha at the top.

df	0.10	0.05	0.02	0.01
8	1.860	2.306	2.896	3.355
9	1.833	2.262	2.821	3.250
10	1.812	2.228	2.764	3.169

3. FINDING A CHI-SQUARE (χ^2) VALUE

Goal: df = 3, alpha (α) = 0.05.

Method: Similar to the T-table, use df for the row and significance level for the column.

df	0.10	0.05	0.025	0.01
2	4.605	5.991	7.378	9.210
3	6.251	7.815	9.348	11.345
4	7.779	9.488	11.143	13.277

4. FINDING AN ANOVA (F-TABLE) VALUE

Goal: df1 = 2 (Numerator), df2 = 12 (Denominator), α = 0.05.

Method: Use Numerator df for columns and Denominator df for rows.

df2 \ df1	1	2	3	4
11	4.84	3.98	3.59	3.36
12	4.75	3.89	3.49	3.26
13	4.67	3.81	3.41	3.18
